Articulating Conveyor for Performer

Maximize flexibility and save time

Developed exclusively for Caljan Performer Telescopic Conveyors, this remarkable unit makes light of loading and unloading vehicles of any size. Moving up and down — and from left to right — EXPRESS Snoot is just where it needs to be; right next to the operator. Parcels are eased onto the conveyor belt with short, ergonomic movements. Parcels can easily be placed at height, utilizing the whole of the vehicle and saving on transport costs.

When the fleet includes vans and similar small vehicles, EXPRESS Snoot can be lowered below floor level. This flexibility means vehicles of ANY size can be served through standard loading bay doors.

Tests have shown that EXPRESS Snoot makes the loading or unloading process more efficient and less strenuous.

Working ergonomically within the Power Zone

In addition to moving up and down, the EXPRESS Snoot can pivot at angles of $\pm 25^\circ$, which means the operator doesn't waste time moving around inside the vehicle. Minimal lifting is required as EXPRESS Snoot is right alongside. The operator works consistently within his or her Power Zone, i.e. between the knee and shoulder. Parcels are eased onto or off the belt with minimal effort and almost no lifting.

Optimize the process with nudge operation

The operator is able to use both hands to move parcels continuously to and from the conveyor, as unique nudge buttons are used to operate the conveyor. Working intuitively the operator just pulls the EXPRESS Snoot over to where it should be and nudges the unit into place with a hip, shoulder, knee or elbow.

Handling loose-loaded cargo with ease
